Automated Material Handling Systems

Dresden

Permanent

Full-time

Fullstack Developer

Automated material handling systems are our passion. We generate the digital twin for all types of automated transport systems, whether rail-guided or free-moving, on the ceiling or on the floor. Our software offers a continuous workflow from planning to the daily operation of an AMHS with live visualization, analysis, adaptation and simulation. With this we support high-tech manufacturing companies to improve efficiency and robustness of their production.

Shape the future

We have many challenging and exciting tasks. You can immediately start a project or dedicate yourself to a part of our product - or both.

You enjoy designing or programming GUIs? The backend is your world? You are developing simulations? Software architecture is your thing? If you agreed to at least one of the questions, we have the right job for you! With us everyone finds a job that suits them and is fun.

Therefore, it is not an issue for us if you want to do something different. Your personal development is not only supported, but explicitly requested!

Learning by doing is our onboarding philosophy. And if you get stuck, everyone in the team will be happy to help you.

What is your creative leeway?

Our office is in a central location. You will find a modern and ergonomically designed workplace that you can customize yourself. So you can choose your hardware yourself and also get a monthly budget at your disposal. Free drinks and snacks are just as natural as regular coaching and health measures.

If you are traveling a lot, we will provide you with a business phone and promote your mobility with a job ticket, company bike or company car - according to your needs and wishes.

It is important to us that you are comfortable! That's why you get 30 days of vacation, a subsidy for child care fees and a company pension scheme.

We probably don't need to mention that you can freely organize your working hours and take home office 😊.

What should you provide?

We don't really care about your degree - even if you don't have one. Your skills count with us. This should include advanced experience in a modern programming language (preferably Java, TS or C#), experience in software design, as well as a basic technical understanding. English is mandatory in our field of activity and you should at least be able to speak and write fluently.

We do not maintain hierarchies. An independent and responsible way of working is therefore essential so you can fully develop your potential with us.

Contact
